

Jed Blankson

+447837162085 | jedblankson17@gmail.com

Product Designer (MSc HCI) with 5+ years' experience designing accessible, evidence-based experiences across web and mobile. I specialise in simplifying complex systems through interaction design, research and coded prototyping. I focus on AI-assisted workflows and agent based interfaces. My work spans platform integrations and cross platform experiences, from redesigning enterprise workflows to building and shipping my own iOS app. I design solutions that engage users and deliver measurable outcomes.

Portfolio:

jedblankson.com

Achievements

- Launched Film Finder (iOS) film discovery app
- Created 4DAP interactive music project with stakeholders from UMG.

Skills

- Journey Mapping
- Accessibility (WCAG 2.1)
- Design system management
- User Research & Usability Testing
- Data visualisation
- Prototyping in code
- Interaction design
- Information architecture

Tools

- Figma
- Adobe Creative Suite
- GitHub
- Mixpanel
- Maze
- Claude Code
- Chart.js
- VS Code
- SwiftUI

Experience

Product Designer, Gearset

2025 - Present | London

Designing intuitive AI-driven experiences for Gearset's Salesforce DevOps platform.

- Sole designer on Gearset's Agentforce feature. Ran 15 customer interviews, then designed a structured view of an agent's topics, actions and versions for the admins doing the deploying. It launched publicly in April 2026 and users choose it over the raw XML view 2 to 5 times more often.
- Designed the safety model, now in Gearset's public deployment guide including a pre-deploy risk analyser, automatic conversion to draft so a change cannot overwrite a live agent and activation as a separate step.
- Prototype the front end in the product's real React and TypeScript codebase, handing engineering a working branch.
- Partnered with CX, CSE and Product on customer UX issues, reducing support tickets by 40%.

Co-Founder / Lead Designer, Film Finder

2024 - Present | London

Led the redesign of my own iOS film discovery app, establishing scalable design foundations.

- Reframed the product around deciding rather than browsing to reduce decision fatigue.
- Interviews and focus groups with 22 users identified choice overload, which enabled me to cut the onboarding collections step and replace the endless feed with three taste-matched picks. The share of new users reaching the core decision feature in their first session rose from 33% to 38%.
- Grew weekly active users from around 20 to 169, with a 2,000-subscriber newsletter and a 7,000 strong community.
- Designed shuffle with undo. 164 users generated over 3,800 shuffles in a month.
- Built the brand identity and the Figma component library and I ship features myself in SwiftUI.

Product Designer, Beauhurst **2023 – 2025 | London**

Designed responsive web experiences for a SaaS platform tracking millions of UK companies.

- Designed and shipped the company's first CRM integration, with HubSpot and Salesforce. Reached 73 clients in six months, 46% past target.
- Designed search, analysis and export for charges data on over a million UK companies, so lenders could assess risk without leaving the platform. Subscription orders rose 20%, with 3,600 views in three months against a predicted 1,000.
- Designed an impact dashboard for government departments and local authorities measuring the effect of funding interventions, built on qualitative interviews with those users.
- Co-built the design system as one of two designers. This included table components, chart components and chart interactions such as sparklines, bar charts and heat maps.

UX Designer, MMT Digital **2021 – 2022 | London**

Designed an accessible chatbot for Translink, Northern Ireland's public transport operator, with a UX design lead, helping impaired travellers plan journeys independently.

- Research found repeat calls about step-free access, staff assistance and train times were driving contact centre wait times. Those findings shaped the voice service Translink went on to build, which reduced call centre queries.
- The prototype was shelved when the client's budget was cut, after I argued for another round of testing.

Education

MSc Human–Computer Interaction Design **2020–2023 | London | City University**

- Focused on interaction design, accessibility, and behavioural science in UX
